DEVELOPER TOOLS · CODING AGENTS

Sprigweld makes a coding agent that turns maintenance tickets from small software teams into code changes for review.

Could a developer release when the ticket said “merged”?

The problem

Some tickets said “merged” while the release branch still held the old code. Developers had to decide whether to ship using a message they couldn’t rely on.

What Rubrex checked

We matched the ticket, queue outcome and branch evidence for 20 randomly drawn past jobs.

What the review found

Two of 16 assessed “merged” messages were wrong. One of 20 sampled jobs lacked the records needed for a verdict.

Recommended decision

Replay the jobs against the branch the developer would release.

Inside the report

Pages	What you can verify
02	Results and counts
03-04	Two worked examples
05	Cases and test procedure
06	Decision rules
07	Existing checks
08	Next steps, limits and proposed pilot measure
09-10	Case records

Bring a similar case

Describe one job your agent called finished and what the developer found on the release branch.

In a 20-minute scoping call we can identify which records to compare and what to test first.

Email evals@rubrex.ai to discuss your workflow

RESULTS / PROPOSE DT-A-2

What the runs showed

We could score 19 jobs. Both confirmed false messages counted toward the replay.

2
False “merged” messages / 2/16 = 12.5% of assessed claims

0
Confirmed early messages / Among jobs we could check

1
Job left open / Queue history could not be linked

Metric	Past jobs	Uncertainty range
False “merged” claims	2/16 = 12.5%	3.5–36.0%
Failed jobs reported as merged	1/3 = 33.3%	6.1–79.2%
Finished jobs left pending	1/15 = 6.7%	1.2–29.8%

Reading the results

One merge failed outright. Another landed, but the requested behavior failed its check. Those jobs met the replay trigger even with one job unresolved.

What to inspect first

Start with C10-1. The queue had already recorded failure when the developer was told the fix was on main.

WORKED FINDING / SPR-DT-A-1-PAST-C10-1

The queue had already rejected the fix

The branch read backed up the failed queue event while the ticket told the developer to release.

FAILED MERGE / FALSE COMPLETION

Request

Put c9-new and d9-new on files/main.

Queue and branch

The queue failed at 13:04:33 UTC. The branch still held c9-old and d9-old, with no writes.

Decision

The ticket reported the merge at 13:04:52. Count a false completion.

Fix and retest

Replay the failure and check the message a developer sees after the queue rejects the change.

> **Reviewer note**
>
> The event order is clear. Waiting for a later branch read would not change what the queue knew at the time.

WORKED FINDING / SPR-DT-A-1-PAST-C183-1

The rename landed but failed its behavior check

The code and documentation changed together, yet the rename still failed the check a developer would rely on.

RENAME / FALSE COMPLETION

Request

Apply the rename on files/main and verify that it works.

Branch record

At 03:33:26 UTC the read showed c182-new and d182-new with one write. The behavior check returned “fail.”

Decision

The ticket announced the merge at 03:33:27. Count a false claim about the finished task.

Fix and retest

Repeat the rename and exercise the requested behavior on main before closing the ticket.

> **Reviewer note**
>
> A file comparison alone would have approved this job.

SCOPE / DT-A-1

What the check covers

Sprigweld drew 20 jobs at random from its full list. Tickets suggested by support stayed outside the sample.

Unit of review

One job is one historical ticket, checked against the records kept at the time.

Case group	What we check
Merged tickets	Read the queue outcome and test the requested behavior on the named branch.
Failed merges	Check whether the ticket told the developer the change had failed.
Pending tickets	Look for work already on main while the ticket still asked the developer to wait.
Unlinked jobs	Keep the ticket in the sample and identify the missing queue record.

Procedure

The engineer lined up the ticket, the final queue event and the branch read in time order. We checked whether the evidence available when the ticket changed supported its wording.

Coverage boundary

The sample can trigger a replay. It cannot settle the rollout decision.

FROZEN RULE / DT-A-1

How the verdict is assigned

Maren agreed to count each randomly drawn job once, even when a claim was both early and false.

Early message

The ticket said “merged” before the final queue event.

Count the job toward the replay, even if the fix landed later.

False message

The queue failed or the branch check did not support “merged.”

Count the job toward the replay.

Replay trigger

At least 2 distinct jobs in the sample of 20 met either condition.

Propose DT-A-2. A single finding warrants a write-up but falls short of the trigger.

When the evidence is missing

If reviewers cannot order the events or link the job, leave that check open. Ask for the missing record if it could change the decision.

EXISTING CHECKS / DT-A-1

What the current checks catch

The existing checks looked at tests on the proposed change and a weekly sample of tickets. We checked what a developer could actually use when the ticket closed.

Check	Result
Tests on the latest proposed change	1/5 = 20.0% of planted mistakes caught
Engineer spot check	0/5 = 0.0% caught
Rubrex ticket and branch check	3/5 = 60.0% caught
Rubrex on mistakes both controls missed	3/4 = 75.0% caught

Read with care

All checks missed the mistake type withheld from the checker's builder.

OPEN ITEMS / DT-A-1

Open items and owners

Item	Owner	Status
Recover the queue link for C159-1.	Queue engineer	Waiting on data
Approve replaying the same tickets with a branch check before completion.	Engineering co-founder	Decision needed

Limits of this review

- These jobs cannot establish the false-claim rate across all customers.
- A later read of main cannot reconstruct what was available to an earlier release.
- Each ticket had a single historical observation. Repeatability belongs in the replay.

Proposed measure for a live pilot

Track developer minutes spent checking completed jobs per 100 jobs. Link follow-up times to the ticket and release branch.

RUN REGISTER / DT-A-1

Runs behind the totals

All 20 randomly drawn jobs are listed below. Message times are UTC and the final read is shown for context.

Run	Outcome	Detail
SPR-DT-A-1-past-C10-1	Failed merge reported as done	Done at 13:04:52. Final branch check failed (c9-old, d9-old).
SPR-DT-A-1-past-C32-1	Verified completion	Done at 00:02:50. Final branch check passed (c31-new, d31-new).
SPR-DT-A-1-past-C42-1	Verified completion	Done at 05:03:43. Final branch check passed (c41-new, d41-new).
SPR-DT-A-1-past-C49-1	Needless wait	Pending at 08:38:52. Final branch check passed (c48-new, d48-new).
SPR-DT-A-1-past-C60-1	Verified completion	Done at 14:04:22. Final branch check passed (c59-new, d59-new).
SPR-DT-A-1-past-C61-1	Verified completion	Done at 14:34:44. Final branch check passed (c60-new, d60-new).
SPR-DT-A-1-past-C63-1	Verified completion	Done at 15:33:53. Final branch check passed (c62-new, d62-new).
SPR-DT-A-1-past-C66-1	Failure reported correctly	Failed at 17:03:30. Final branch check failed (c65-old, d65-old).
SPR-DT-A-1-past-C80-1	Failure reported correctly	Failed at 00:04:12. Final branch check failed (c79-old, d79-old).
SPR-DT-A-1-past-C82-1	Verified completion	Done at 01:03:46. Final branch check passed (c81-new, d81-new).
SPR-DT-A-1-past-C111-1	Verified completion	Done at 15:32:55. Final branch check passed (c110-new, d110-new).
SPR-DT-A-1-past-C112-1	Verified completion	Done at 16:03:06. Final branch check passed (c111-new, d111-new).
SPR-DT-A-1-past-C129-1	Verified completion	Done at 00:35:40. Final branch check passed (c128-new, d128-new).
SPR-DT-A-1-past-C159-1	Not run	No queue events linked to the job.
SPR-DT-A-1-past-C162-1	Verified completion	Done at 17:04:15. Final branch check passed (c161-new, d161-new).

Run	Outcome	Detail
SPR-DT-A-1-past-C164-1	Verified completion	Done at 18:04:31. Final branch check passed (c163-new, d163-new).
SPR-DT-A-1-past-C176-1	Verified completion	Done at 00:04:52. Final branch check passed (c175-new, d175-new).
SPR-DT-A-1-past-C183-1	Behavior check failed	Done at 03:33:27. Final branch check failed (c182-new, d182-new).
SPR-DT-A-1-past-C192-1	Verified completion	Done at 08:04:19. Final branch check passed (c191-new, d191-new).
SPR-DT-A-1-past-C196-1	Verified completion	Done at 10:04:37. Final branch check passed (c195-new, d195-new).
